ANCHOR FENCE BASE FAMILY: PRODUCT GUIDE

At SONCO, we make it easy to secure temp fencing and reinforce your perimeter. Minimize tripping, reduce asset damage, and avoid legal pitfalls with our field-tested fence stabilizers.

Introducing the Anchor Fence Base Family:

A safe, practical answer to everyday fencing challenges. Engineered to replace conventional fence stands, these durable, anti-trip ballasts are vital in advancing industry safety.

With proper installation and maintenance, your Anchor Stand, Anchor Weight or Anchor Block will last for years. Before deploying your new **temp fence base**, optimize its use and value by reviewing this user manual.

And for more breakthrough temp fence solutions, visit [SONCO online](https://www.sonco.com).

ANCHOR BLOCK FENCE BASE

Say Goodbye to Unreliable Concrete Blocks

SONCO's Anchor Block serves as both a stand and base weight, offering a high-visibility, safe alternative to traditional concrete blocks. This 2-in-1 solution enhances temporary fence stability and security, reducing liability and protecting jobsites without additional purchases, streamlining fence setup and improving safety.

Safe & Easy To Use

- Carry multiple Anchor Blocks at once using the product's built-in handles.
- Anchor Blocks install quickly and stack for easy handling and storage.
- Reduce tripping with the product's compact profile, hi-vis ends and rounded edges.

Robust Construction

The Anchor Block fence base is a proven alternative to concrete block weights. Constructed from a tough, shock-resistant thermoplastic compound, this ballast device is field-tested for performance and durability. Stabilize and support temporary fence panels — and protect panels from toppling in heavy wind.

Feature Extras

- **Recyclability:** Anchor Block is a closed-loop recycling product. Constructed from recycled PVC, this fence base is fully recyclable at end of lifespan.
- **Customization:** Offered in custom colors with imprinted branding or logos. [MOQs apply].
- To further stabilize a fenceline in a windy area or if you are hanging privacy screen, use the Anchor Block and Angle Brace Stabilizer System

Why Choose The Anchor Block Fence Base?

The Anchor Block fence base is a hi-vis temp fence ballast, equivalent to the use of 20 concrete blocks. Moreover, this type of fence base doesn't break easily compared to concrete blocks.

Engineered to replace bulky, breakable concrete blocks, this heavy-duty PVC stabilizer minimizes tripping and fence-panel toppling. Anchor Blocks withstand years of heavy use and weather and are fully recyclable at lifespan end.

Weight

Anchor Block: 53lb/24kg

Part Name

Anchor Block

Product Code

0253

Inspection & Maintenance

Care for your Anchor Block product by following the guidance below.

1

Inspect each product for signs of damage between every installation.

2

Clean product between every use to remove debris.

3

Safely stack multiple Anchor Blocks when storing or transporting.

Inspect for Signs of Damage

- Cracked areas indicate damage from improper use.
- The product should lie flat on the ground, depending on ground conditions. A visibly warped product indicates damage from improper use.
- If product is damaged, avoid future use and recycle it properly.

Spare part: Hi-vis and plastic ends that perfectly fit the anchor block increasing visibility to avoid tripping hazard.

ANCHOR BLOCK RECYCLABILITY

**Materials**

OxStand is made from HDPE and steel which are fully recyclable.

Contact SONCO to return end-of-life plastics.

CONCLUSION

Thank you for your interest in the Anchor Fence Base Family.
